ABOUT GRABME

An electric mobility ecosystem built as one product.

GRABME connects the passenger journey, driver operations, business programs, Mission Control, and the in-car experience through one EV-first mobility platform.

[Ride](#) [Drive](#) [Operate](#) [Business](#) [Connect](#) [Airport](#) [Students](#) [About](#)

[Download App](#) 

WHAT GRABME IS

More than an e-taxi booking app.

The public passenger experience is only one layer. GRABME is designed as a connected operating system for electric mobility - riders, drivers, operations, business programs, and the cabin working together.

Electric by default

GRABME is built around an EV-only fleet rather than treating electric vehicles as a secondary ride category.

One passenger journey

Booking, matching, pickup, live ride, completion, ratings, programs, and airport mobility stay connected.

Built for operators

Mission Control gives the mobility business an administrative layer behind the passenger and driver apps.

Connected programs

Corporate, student, membership, and airport experiences reuse the same platform foundations.

Live mobility

Route, ETA, driver, vehicle, and ride state remain central to the active journey.

Connected cabin

GRABME Connect continues the authenticated ride inside supported vehicles with live trip information and cabin experiences.

PRODUCT FAMILY

Ride. Drive. Operate. Connect.

Ride gives passengers the end-to-end mobility experience.

Drive gives drivers the tools to receive and execute rides.

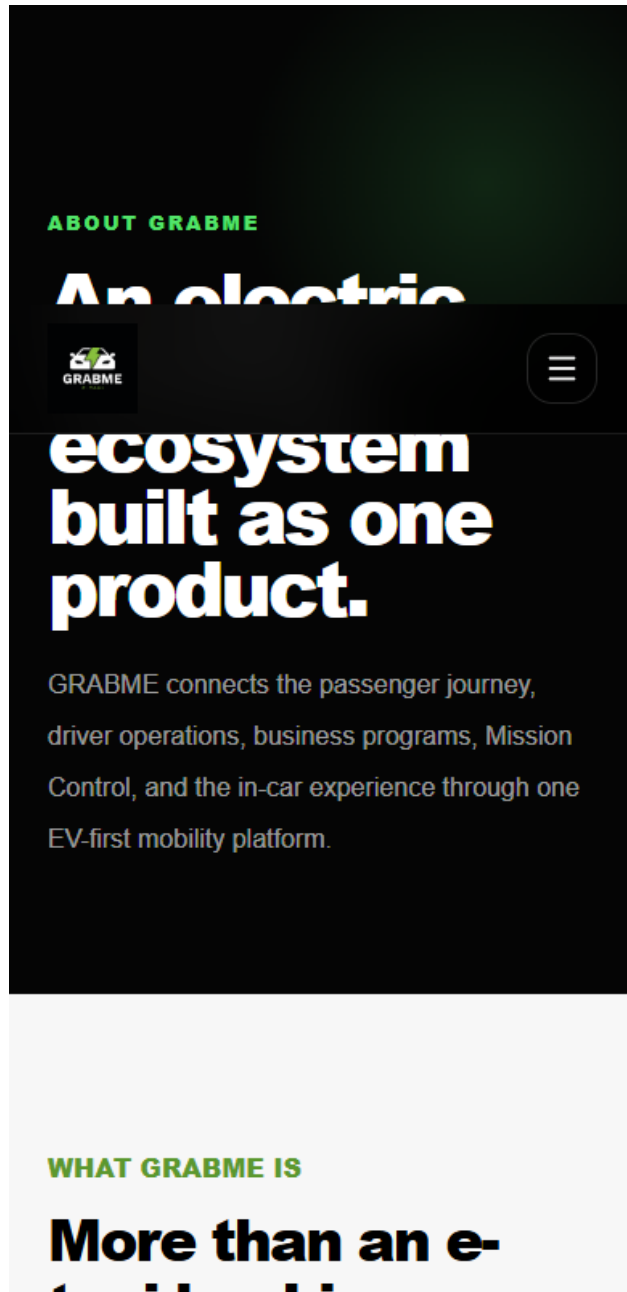

Operate gives GRABME the administrative and dispatch foundation behind the network.

Connect extends the active journey into supported vehicle cabins.

Electric mobility, connected. Built for passengers, drivers, businesses,
and the journey inside the vehicle.

The booking experience keeps the vehicle, price, journey details, ride categories, timing, and payment context close together so the passenger can make a decision without jumping between screens.

Ride choice

Standard, Priority, Premium and Luxury EV options.

Timing

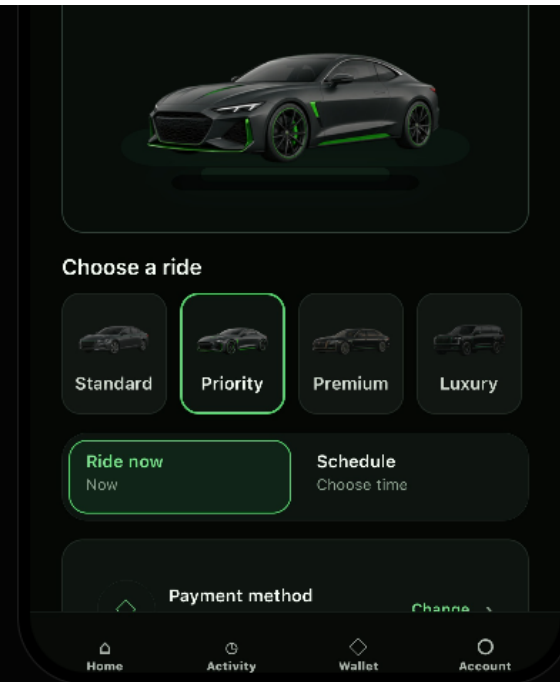

Ride now or choose a scheduled journey.

Live context

Pickup, route, ETA, driver and vehicle information.

Completion

Trip history, rating and repeat-ride context.

EV RIDE CATEGORIES

Choose the journey that fits.

Standard

Everyday electric mobility

A straightforward EV ride for everyday trips and daily transportation.

Priority

Faster matching

A higher-priority ride option for passengers who want quicker matching when available.

Premium

More comfort

A comfort-focused electric ride category for passengers who want an upgraded journey.

Luxury

Executive travel

A premium vehicle experience for executive trips, events, and special journeys.

Airport

Travel-ready mobility

A dedicated airport journey with travel details, pickup coordination, and suitable EV selection.

Students

Verified student mobility

Student-oriented access and program benefits within the main GRABME passenger experience.

PASSENGER FLOW

One continuous ride lifecycle.

STEP 1

Choose your destination

Search a destination and review the journey from your current pickup context.

STEP 2

Choose how to travel

Select Standard, Priority, Premium, Luxury, Airport, or an eligible program journey.

STEP 3

Ride now or schedule

Request immediately or choose a scheduled ride when you want to travel later.

STEP 4

Confirm pickup & payment

Review pickup and pay with a supported passenger payment method.

STEP 5

Match with a driver

Follow searching and matched states as GRABME assigns an available EV driver.

STEP 6

Follow the live trip

See driver, vehicle, ETA, route, trip progress, completion, and rating.

PAY YOUR WAY

Payment stays inside the ride.

Passenger payment options are part of the booking experience. Driver settlement and cash-out workflows are handled separately in driver operations.

Visa

Card payment inside the passenger journey.

Mastercard

Card payment inside the passenger journey.

Wish Money

Supported digital payment option for riders.

Cash

Pay the driver in cash where enabled.

Public visual record only. Source backup is separate. No form submissions or private Admin data captured.

Ride Reporting

Review ride activity and usage

summaries for clearer company
mobility oversight.

Program Controls

Manage eligible users and business
mobility access from the operational
layer.

Airport Travel

Use the same GRABME business
program for eligible employee and
executive airport journeys.

Account Security

Keep company accounts, payments,

ride data, and location-sensitive
access within controlled platform
boundaries.

ONE BUSINESS JOURNEY

**Employees ride.
Companies stay in
control.**

Rider experience

Employees use the same GRABME
passenger journey for eligible
business rides.

Program layer

Company eligibility, usage, billing, and controls sit behind the rider experience.

Operational visibility

Mission Control provides the administrative foundation for company mobility oversight.

GRABME AIRPORT

Airport mobility without leaving the GRABME journey.

A dedicated EV airport experience built around travel details, pickup coordination, ride choice, live visibility, and a clear end-to-end trip lifecycle.

[Ride](#) [Drive](#) [Operate](#) [Business](#) [Connect](#) [Airport](#) [Students](#) [About](#)

[Download App](#) 

Airport Ride

Choose the airport journey inside the GRABME passenger experience for pickup or drop-off travel.

Travel Details

Keep relevant airport journey information such as flight and terminal details attached to the booking where applicable.

Pickup Coordination

Confirm pickup information and follow the same clear matching and trip lifecycle used across GRABME.

Vehicle Choice

Select an available EV category that suits comfort, passenger count, and travel needs.

Luggage Ready

Choose an appropriate vehicle for solo travel, families, executives, or luggage-heavy trips.

Meet & Greet

Support a clearer arrival experience for eligible airport journeys where the service is enabled.

THE AIRPORT FLOW

Travel details meet live mobility.

Airport rides use the same trusted GRABME lifecycle: request, match, driver arrival, pickup, live trip, and completion - with the travel information needed for airport movement layered into the journey.

Before pickup

Review airport, pickup, ride category, timing, and travel details.

Driver matched

See the assigned driver, vehicle, ETA, and ride state.

At pickup

Coordinate the airport pickup with clear trip and location visibility.

On the move

Follow the live electric journey through arrival and completion.

GRABME CONNECT

Your ride, **inside the cabin.**

GRABME Connect extends the active ride into the vehicle with passenger login, live trip visibility, entertainment, and dedicated cabin modes.

Explore Connect →

Get GRABME

Designed & built by MetaHaus.

[Ride](#) [Drive](#) [Operate](#) [Business](#) [Connect](#) [Airport](#) [Students](#) [About](#)

Download App 

CURRENT CONNECT EXPERIENCE

Everything the passenger needs during the active ride.

Passenger Login

Start a ride-linked cabin session so the in-car experience follows the authenticated passenger and active trip.

Live Journey

Keep route progress, destination, ETA, driver details, vehicle details, and trip state visible in the cabin.

Entertainment

Open the current in-car entertainment surface during the journey from the GRABME Connect screen.

Kids Mode

A simplified child-friendly mode for family journeys and a clearer cabin experience.

Work Mode

A focused in-car mode for passengers who want a quieter, more work-oriented journey.

Wi-Fi Portal

Support the connected cabin experience through the in-vehicle GRABME interface and available network connection.

Ride-Linked Safety

Keep core trip, driver, vehicle, and safety information attached to the active ride session.

RIDE-LINKED BY DESIGN

The cabin experience follows the journey.

Connect is not a separate destination. It is the in-car continuation of the GRABME ride, designed around the same passenger, vehicle, driver, and trip lifecycle.

01

Enter the vehicle

The passenger boards a GRABME EV equipped with the current Connect experience.

02

Open GRABME Connect

The cabin screen presents the connected ride surface for the active journey.

03

Continue the ride

Live journey information remains visible while entertainment or a cabin mode can be used.

04

End with the trip

The connected passenger session follows the ride lifecycle and closes with the completed journey.

CONNECTED TO THE RIDE

**One passenger experience,
from phone to cabin**

VEHICLE BOUNDARY

Software-led, vehicle-aware.

from phone to cabin.

The Passenger app owns booking and the active trip. GRABME Connect extends that same journey inside supported vehicles, keeping the cabin experience aligned with the ride rather than creating a second disconnected product.

GRABME Connect controls the software experience shown on supported in-car devices. Physical vehicle functions remain dependent on the capabilities and authorized interfaces provided by each EV manufacturer.

Ride Operations

See and manage the ride lifecycle across active and completed mobility activity.

Dispatch

Support ride assignment and operational visibility across passenger and driver activity.

Drivers

Manage driver profiles, onboarding, status, and operational records.

MISSION-CONTROL | desktop | capture segment 2

<https://www.grabmeapp.com/mission-control> | 2026-09-28T18:30:46.499Z

Passengers

Maintain passenger visibility and account-level operational context.

Corporate

Support company mobility programs and business account oversight.

Students

Manage student mobility programs and verified program access.

Airport

Keep airport journeys visible within the same operational platform.

Memberships

Support rider program and membership administration.

Payments

Maintain operational visibility across passenger payment activity, ride settlement context, and driver payout workflows.

Reporting

Review mobility activity and program data through the administrative experience.

OPERATIONS, NOT JUST SCREENS

The system behind the passenger and driver apps.

Passenger requests a ride

Mission Control receives operational context around the ride and its lifecycle.

Driver receives and executes

Driver availability, matching, pickup, trip progress, and completion remain connected.

Programs stay attached

Corporate, student, airport, membership, wallet, and rating context remains part of the platform.

Operations stay visible

Administrators have one place to oversee mobility activity and supporting programs.

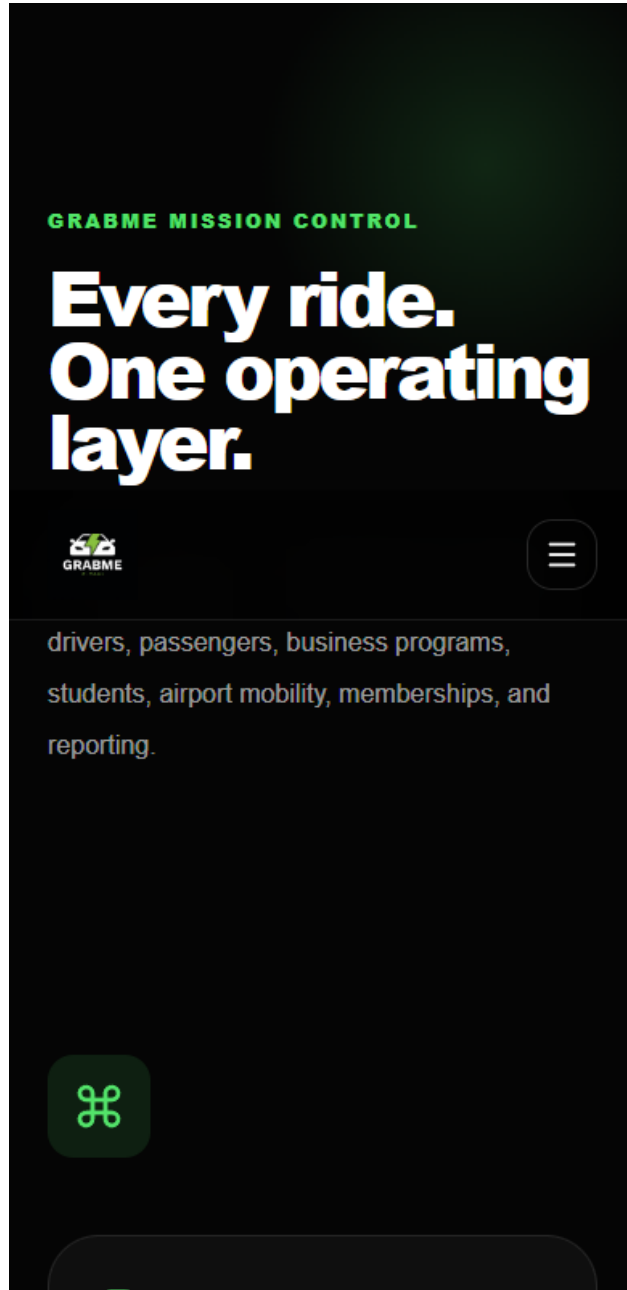

Electric mobility, connected. Built for passengers, drivers, businesses, and the journey inside the vehicle.
